TimeControl®

TimeControl Benefits

Challenge

You've got many users of Microsoft Project Desktop and your organization has already adopted SharePoint for collaboration. Now you need to create an collaborative project management environment. The missing link? ***Time.***

Response

TimeControl was one of the earliest applications to link to Microsoft Project. We've had a link to Project since 1995. TimeControl can also be provisioned directly into SharePoint. TimeControl becomes the integration point that allows you to use Microsoft Project and SharePoint and integrate timesheet data into a collaborative project environment!

TimeControl is already integrated

- ✓ The architecture of TimeControl 6 is designed to integrate with both Project and Project Server. You can optionally install the TimeControl interface directly into a SharePoint worksite and your Project Web Access.
- ✓ TimeControl already integrates with both Microsoft Project Standard and Professional on the desktop.

Integration Features

- ✓ Generate a project in TimeControl automatically with the OnPublish event in Project Server
- ✓ Move tasks and assignments from Project Server to TimeControl on demand, or automatically on a schedule or OnPublish
- ✓ TimeControl supports the movement of data from Enterprise fields and user defined fields

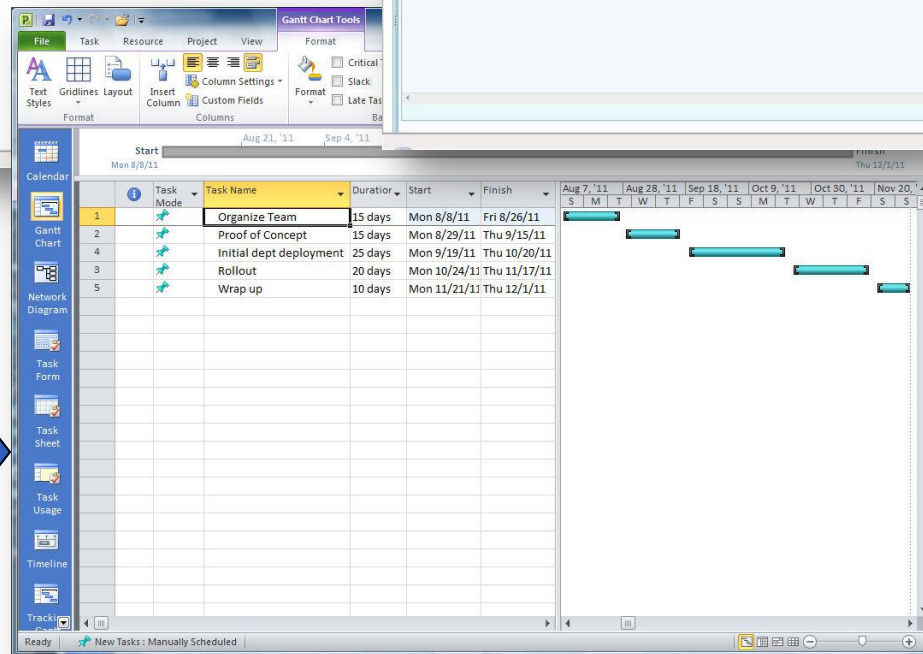

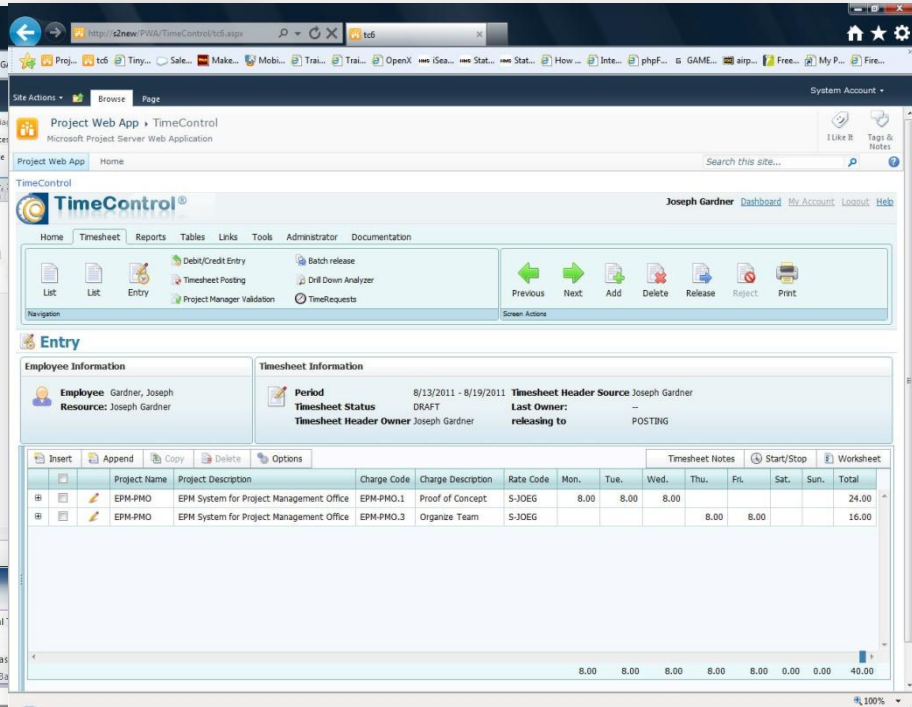

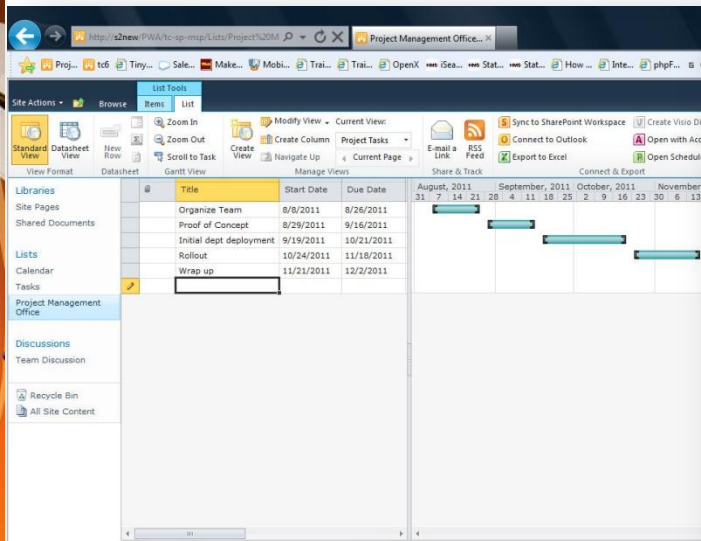

Integration Features

- ✓ TimeControl can display only assignments or be more open to show more tasks
- ✓ Timesheet data is approved in TimeControl both by Supervisors and Project Managers
- ✓ TimeControl moves data back to Project / Project Server on demand or on a schedule
